Response to Arguments

Applicant's arguments with respect to claims 15-19-21-22, 24 and 28-32 have been considered but are most in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 103

The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

Claims 1-3, 5-6, 15-16 and 18-22 rejected under 35 U.S.C. 103(a) as being unpatentable over Bolosky et al. (US 6,118,790) in view of Soirinsuo et al. (Us 6,084,855).

1. Regarding 1-3, 15-16, 18-22, Bolosky discloses a method of switching audio on an egress channel over a network (abstract, lines 1-2; fig. 1; col. 3, lines 47-53). The method comprises generating first and second audio streams (col. 3, lines 21-22) of egress packets including inherent control header information (col. 2, lines 58-60) and delivering the streams to an inherent network interface controller (fig. 1, items 10 and 12; note: network interface controller of audio station for connecting to the Internet). However, Bolosky does not disclose evaluating the relative priority of the streams based on priority information in the control header to determine which stream to transmit to the network. Soirinsuo discloses transmitting packets to a network based on the relative priority of the packets (col. 9, lines 53-60 and col. 10, lines 10-12). Therefore, it would have been obvious to one skilled in the art at the time the invention was made to transmit packets according to priority in the invention of Bolosky in order to transmit packets according to delay or bandwidth requirements.

Application/Control Number: 09/893,743

Art Unit: 2666

2.

Regarding claim 5-6, Bolosky in view of Soirinsuo does not disclose RTP information in

IP packets. One skilled in the art would recognize that RTP information is typically included in

real-time Internet packets. Therefore, it would have been obvious to one skilled in the art at the

time the invention was made to have RTP information in the IP audio packet of Bolosky in order

to properly control the flow of the packets through the network to reduce delay or to properly

control playback of packets at a reception device.

Allowable Subject Matter

3. Claim 4 is objected to as being dependent upon a rejected base claim, but would be

allowable if rewritten in independent form including all of the limitations of the base claim and

any intervening claims.

4. Claims 7-14, 17, 23-26 and 28-32 are allowed.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Kevin Harper whose telephone number is 571-272-3166. The

examiner can normally be reached weekdays from 11:30 AM to 8:00 PM ET.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's

supervisor, Seema S. Rao, can be reached at 571-272-3174. The centralized fax number for the

Patent Office is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent

Application Information Retrieval (PAIR) system. Status information for published applications

Page 3

Application/Control Number: 09/893,743

Art Unit: 2666

Page 4

may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only (applications must be associated with a customer number). For more information about the PAIR system, see pair.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
